

Windtight and rainproof on the outside

Roof underlay membrane penetration

- Guide the membrane precisely around the circular penetration
- **Note: Start sealing at the lowest point!** Provides extra protection against water penetration

- Fix Wigluv half on the circular penetration, then half on the membrane
- Press down firmly
- Apply subsequent pieces in overlapping layers

How it should look:

- Circular penetration sealed windtightly in layers with Wigluv 60
- Water will reliably run off
